Repository log:

saved versions on local ~~ass~~ machine -  
just the one commit.

P1 solution: Encoding of expression (c)

Clear description of how given arithmetic  
example would be encoded.

P1 solution: Explanation of expression (b) with `expr_eval`; all four evaluations

all four expressions correctly computed.

P2 solution: Compilation & tests (note that test #24 is not be used)

Code does compile, but some early tests take  
a lot of time. Test 24 will take too long.

P2: Description of solution strategy, code explanation

Clear explanation

RECOMMENDED GRADE:
